A catalog naturally being limited we have endeavored in this issue to show only such designs as are practical and up to date, eliminating all useless matter, thus keeping the book of a convenient size.

We feel confident that after a careful inspection you will find the book attractive, conveniently arranged and complete in all departments.

## DIRECTIONS FOR ORDERING

*Time, Annoyance and Expense can be Saved by Noting and Following Closely the Suggestions Below:*

We will understand all orders and inquiries as calling for **Regular Western Style** and **Sizes** as described in this catalogue, unless specifically ordered otherwise, or unless covered by standing instructions to the contrary.

**Be Explicit** in ordering. Do not assume that we know what you want.

Always give **width** first, length or height second, then thickness.

Always use inches to designate glass sizes, and feet and inches for openings or outside measurements.

### SASH and WINDOW.

The term "Sash" indicates only one piece to fill opening.

The term "Window" indicates two pieces (upper and lower sash).

State size of glass, number of lights, opening (unless regular stock) and thickness. State whether open or glazed, and if glazed whether of single or double strength.

If a window whether check or plain rail.

If segment or circle head give number of style desired (see page 43) and radius of circle or segment if not regular. When not otherwise specified we will understand for Circle Head Style Fig. 2 with a radius one-half the width of

the sash less the width of the stile, and for Segment Head Fig. 4 with a radius the width of the sash less the width of the stile.

When an odd sash or window is ordered always give both glass size and number of lights and outside opening, and if possible send sketch.

If glass sizes only are given we will understand that regular stock widths of stiles, rails and bars are required.

**Note**—All windows and sash are understood to be glazed unless ordered open specifically. All glazed windows are primed or oiled one coat unless otherwise ordered.

### DOORS.

In the absence of fuller instructions we will consider an order or inquiry for doors to call for the Standard Four Panel O. G. Door No. 1 quality.

State width, height and thickness, number of panels and arrangement of same and quality.

If molded state whether flush or raised mold one or two sides.

State style of sticking unless O. G. is desired.

If oil finish state whether machine smoothed or hand smoothed is desired.

If odd send sketch or detail.

Odd doors will be made with regular stock widths of stiles, rails, muntins and panels unless specifically ordered otherwise.

### OUTSIDE BLINDS.

We will understand all orders for blinds to call for Regular Western Stock Styles and Sizes, 1½ inch rolling slats unless specifically ordered otherwise.

State size and number of lights of window for which blinds are ordered, also thickness of blind, and whether all rolling slats (R. S.), stationary slats (S. S.), or half rolling and half stationary (½ R. S. ½ S. S.)

If odd give outside opening, thickness, arrangement of slats and send sketch.

The regular stock blind is the width of the window to be covered and one inch longer.

Orders for brick buildings must so specify, and will in the absence of additional instructions be made two inches longer than window opening.

A blind indicates a single piece to fill opening.

A pair of blinds indicates two pieces to fold together to fill opening.

A set of blinds indicates more than two pieces, and should always be accompanied by sketch.

### INSIDE BLINDS.

Inside blinds we will understand are to be made four-fold, 1½ inch thick, outside panel and inside slats; made to be cut in the center unless otherwise stated.

Give exact outside opening always, thickness, number of folds and arrangement of panels or slats.

If cut twice or more specify height from top to each cut.

If wanted to fold into box give width of outside folds.

If not the usual arrangement of panels or slats (see page 62), always send sketch.

DIRECTIONS NECESSARY FOR ORDERING STAIRS  
and STAIR RAILING.

When a flight of stairs is wanted, we should know the height of story from floor to floor, width of joists in second story, width and run of stairs, the size of cylinder, style of base used in the hall, with rough sketch showing about the shape of stairs wanted.

## For STAIR RAILING—Straight Flight.

We require the width of rise and step as sawed out on string board, the number of risers, the size of cylinder from face to face of string or face board, which way it turns at head of stairs, and the number of feet of straight rail required at landing. Unless we receive plan showing otherwise, we always suppose the top riser for a straight flight of stairs to be placed at the edge or spring of cylinder.

## For CIRCULAR or WINDING STAIRS.

We should have an exact plan of stairs as built, giving the width of rise and step, the location of risers in cylinder, etc.; and, when there are straight steps below or above the cylinder, always give the distance from the first square riser to the edge or spring line of cylinder, on the face of string or face board. *Always write your address in full on the plans.*

# HIGH GRADE WOOD MANTELS

**T**HERE never has been and probably never will be designed a substitute that will give the same satisfaction as does the wood mantel surrounding the fireplace. Brick mantels may have been all right in the log cabin and shack of the hunter and trapper with their unfinished walls, disorder and uncleanness, but they are as foreign to our modern homes as a brick floor would be in your parlor or a brick wall in your bath room.

The mantel should be part of the room, the same as the doors and windows are part of the room and should be finished in harmony with these, then if the proper care is taken in the selection of the tile and grate, you will have a harmonious whole, one that is easy to keep so, and you will never have the worry incidental to getting harmony between the balance of the room and the uncheerful, uncleanly brick mantel.

The Wood Mantel is the only proper fixture around your fireplace. It is the connecting link between the tile and the balance of the room and makes the fireplace a part of the whole, always in harmony, regardless of any change in wall decorations or furniture.

The standard width of mantels shown in this book is five feet. That can, however, be increased to five feet six inches, or six feet in width and still be well proportioned by increasing the width of tile opening twelve inches. Prices for these changes quoted upon application.

The manufacturers of these mantels stand back of their goods. They use great care in the selection of well figured woods and guarantee the mantels to be substantially built and well finished.

## THE NEW MONARCH GRATE

The latest of all grates.

Has all known modern improvements.

Has more desirable features than any grate made.

Has the largest fire pot of any grate made.

Has no metal exposed to fire except back damper.

Has curved tile top, very thick. The curved shape reflects the heat into the room.

Top tile is so arranged that cracking of same will not injure the grate.

Has double basket front with damper in same. Ashes fall between these baskets under grate.

Has damper in ash screen so as to control the fire.

Has double or lined hoods to frames so as to preserve the plating.

Has three top dampers.

Upper or flue damper, operated by our improved thumb-screw attachment, whereby damper can be opened any desired width with great ease controlling the draft up the chimney, and can be closed tight to prevent dust or soot from entering the room.

Direct or lower damper, which is used in starting the fire; being directly over the fire, acts the same as a blower, carrying off first heavy smoke and gases, soon heating the flue, thus producing a quick fire and overcomes smoking chimneys. This damper is to be closed as soon as fire is under way, so as to reflect heat into the room.

Down or check draft damper. This damper controls a flue  $1\frac{1}{2}$  inches wide from base of grate under fire to top of back. This flue is to be used in checking and preventing draft through the fire, causing a down draft, whereby fire can be kept alive, consuming limited amount of fuel. It is also used when shaking the grate, to carry the dust up the chimney.

Extra heavy rocker shaker bottom, with trunnions and back bar protected from fire under back.

Back bolted together, allowing for expansions.

Fire tile above the fire bed set in asbestos cement.

Size of firepot in 17 tile, front 24, back  $21\frac{1}{2}$ , depth 10 inches; in 16 tile, 20 inches front,  $17\frac{1}{2}$  inches back, 10 inches deep.

Outside depth of grate over all, 16 inches.

Width of 17 tile back over all,  $28\frac{1}{2}$  inches; of 16 tile  $22\frac{1}{2}$  inches.

Shipping weight, 17 tile, 370 pounds.

Shipping weight, 16 tile 325 pounds.

Side and rear view of the New Monarch, showing dampers, tile top and down-draft flue. Note mode of holding top tile in position. Also screw arrangement to open upper damper.

### THE BUCKEYE GRATE

Side view of the Buckeye grate, showing curved top and damper attachments. These grates differ from the Monarch, in that they have fire tile in back only, with iron sides and air chamber which prevents burning out. The trunnions and back bar of the shaker bottom are not protected, though as in the Monarch. As these grates do not require any material in setting, have the double draft system, preventing smoking chimneys, we recommend them for all cases where a medium price grate is wanted.

### THE CLUB HOUSE GRATE

This set consists of brass frame, plated iron front and shaking and dumping bottom grate.

## WOOD CARPET AND PARQUET FLOORING

**L**S NOT, as many people suppose, a temporary floor covering to be laid down and taken up at pleasure, but is a permanent new floor on top of the old one, and is carefully fitted into all the offsets and runs around all the projections of the room, and is firmly nailed down with small brads; and when finished has the effect of a thick European floor. We make it, however, in the same elaborate and beautiful designs, by the process of gluing the wood on cloth instead of to another piece of wood an inch or so thick, and we make it at a much less cost, as we utilize the floor already down, and thus occupy but five-sixteenths of an inch, instead of one inch or more (as with thick parquet).

Where disappointments have arisen from any kind of hardwood floors, it has invariably been from not understanding the proper treatment, or in expecting too much of them. The treatment of floors should be the same as the European.

The common remark "that a bare floor is so cheerless" comes wholly from the impression given by an ordinary pine floor, with its unsightly cracks, and from not having seen the effect of a well-laid Parquet Floor, in combination with the furniture and other articles, in keeping with the character of the room in which it is laid.

### **WOOD CARPET and PARQUETRY**

Is made in the uniform thickness of five-sixteenths of an inch. The woods used are all kiln dried and prepared so as to prevent shrinkage. Care must be taken to preserve them from dampness until the floor is laid and finished. The straight carpeting, 36 and 28 inches wide, rolls up like an oilcloth, and is thus readily shipped. The borders and strips are twelve feet long, and the Parquet Flooring comes in sheets 2x6 feet, and make a solid package for shipping.

### **RUGS**

Are being extensively used, on account of their healthfulness and convenience in keeping the room clean and free from dust. They are generally used on the middle part of the room, leaving a margin of about two feet around sides of the room for furniture to stand on. The floor upon which they lie should be a good one, with some degree of ornamentation, and free from joints and cracks. The dust on the floor is easily removed with a damp cloth or brush, and the rug can be rolled up at pleasure, and be taken out to be freed from dust. Rugs are now made to order at a very moderate cost, and of any desired shape and size.

### **ESTIMATES**

Free of charge for floors or borders, with full instructions and working drawing, will be cheerfully given to parties sending us a sketch of the ground plan, with measurements of the space desired to be covered. State what class of room it is for, also if a cheap or ornamented floor is desired. Our floors vary from \$1.25 to \$18.00 per yard. It is better to say how expensive a floor is desired, and the design will be made in accordance.

## FLOORING STRIPS, WOOD CARPET, PARQUETRY

$\frac{5}{16}$ -inch Thick, Square Edged.

These floors have become so thoroughly established as to the plans of manufacture in  $\frac{5}{16}$ -inch thickness, and the simple method of laying them on new or old floors, that no extended description other than the designs offered in this book is considered necessary.

## PARQUETRY

Consists of Strips and Blocks of Hardwood, Fastened Together at Edges and on Backs, in Slabs of Convenient Size for Laying

Below we present some of our popular Border patterns in 10 and 12-inch widths, which can be used with Flooring Strips or Wood Carpet to widen them as desired, and with Flooring Strips for fields, fine results are gained.

Where floor plans are sent us for estimate, we are pleased to make up combinations of borders and fields to suit and harmonize with the hardwood trim and furnishings of each room.

Plain sawed red and white oak, quarter-sawed red and white oak, unselected birch, red birch, white birch, curly birch, unselected maple, white maple, elm, walnut, cherry and sycamore.

Regular widths  $1\frac{1}{2}$  inch and  $2\frac{1}{4}$  inches.

### Approximate Weights

$\frac{3}{8}$  inch, 1000 lbs. per 1000 feet.

$\frac{1}{2}$  inch, 2100 lbs. per 1000 feet.

Use the following table to arrive at the amount of flooring required. Compute the square feet of surface in the room and add to same the following percentages:

$\frac{3}{8} \times 1\frac{1}{2}$ inch.....	Add 33 $\frac{1}{3}$ %
$\frac{3}{8} \times 2\frac{1}{4}$ inch.....	Add 25 %
$\frac{1}{2} \times 1\frac{1}{2}$ inch.....	Add <del>33<math>\frac{1}{3}</math>%</del> 50%
$\frac{1}{2} \times 2$ inch.....	Add 37 $\frac{1}{2}$ %
$\frac{1}{2} \times 2\frac{1}{4}$ inch.....	Add 33 $\frac{1}{3}$ %
$\frac{1}{2} \times 3\frac{1}{4}$ inch.....	Add 25 %

### A Few Reasons for Its Superiority over Carpets

- 1st—They are more sanitary.
- 2nd—They are more healthful, handsome and economical than carpets.
- 3rd—They are kept clean with less labor and only require dusting the same as furniture, the unpleasant task of sweeping being entirely eliminated.
- 4th—They are cheaper than carpets and far more harmonious with the surrounding furniture.
- 5th—They will outwear more expensive carpets many times over and also retain their natural appearance for years with very little care.

Our flooring is run on a slow feed and is perfectly matched, both sides and ends, surfaces sanded to a polish and bored blind for nailing, also bundled in such a manner to protect faces from dirt.

## IMPORTANT NOTICE.

When moulding is priced by the inch *it is in all cases understood* that the price is based on ripping width of lumber, that is:  $\frac{1}{4}$  of an inch wider than the finished size of moulding. For example: A  $\frac{7}{8}$  inch thick panel moulding if made to finish  $1\frac{3}{4}$  inches wide, would be charged as 2 inches (being ripping size); to finish full 2 inches, would be charged as  $2\frac{1}{4}$  inches, etc.

Approximate weight of Mouldings, 1x1 inch, per 100 lineal feet, 15 pounds
